Read the following' passage and answer question in the most appropriate manner.

Management theories help organizations to focus, communicate, and evolve. Using management theory in the workplace allows leadership to focus on their main goals. When a management style or theory is implemented, it automatically streamlines the top priorities for the organization. Management theory also allows us to better communicate with people we work with which in turn allows us to work more efficiently. By understanding management theory, basic assumptions about management styles and goals can be assumed and can save time during daily interactions and meetings within an organization.

Theories can only reach so far. and management theories are no exception. There is no such thing as a one-size-fits-all management theory. What may work for one organization may not be relevant for another. Therefore, when one theory does not fit a particular situation, it is important to explore the option of developing a new theory that would lead in a new, more applicable direction. While some theories can stand the test of time, other theories may grow to be irrelevant and new theories will develop in their place.

From the late 1700s through the early 1900s, the Industrial Revolution brought extraordinary change to the workplace and forever transformed the way companies operate. The Industrial Revolution brought better and faster technology allowing companies to perform more efficiently than ever before and gave them the ability to dramatically increase their output. In order to meet demand, company leadership had to ensure their employees were productive.

96. Given below are two statements:

Statement I : Management is the ultimate tool for achieving business goals.

Pg 32

Statement II: It was management only which initiated industrial revolution.

In the light of the above statements, choose the correct answer from the options given below:
